

NESS

Wonders

Explore the Taj Mahal in Augmented Reality

Complete User Guide

WHAT YOU WILL DISCOVER

- Walk through the mausoleum guided by a glowing pink path that links every scan point
- Scan architectural features for AI-powered explanations in your language
- Capture and share live AR photos of your visit
- Chat with an AI historian and AR navigator assistant
- Track your tour progress across 165 points of interest
- Save discoveries to a personal journal, anytime
- Plan a route by duration and interest, or take the guided must-see tour
- Hear each feature narrated with an audio guide in your language
- Get proximity alerts and gentle vibrations as you approach each point

1. Welcome to NESS Wonders

NESS Wonders is an immersive augmented reality application that lets you explore one of the world's most iconic monuments — the Taj Mahal — from the palm of your hand. Whether you are a curious traveler, a student of history, or an architecture enthusiast, NESS Wonders turns your device into a window onto 17th-century Mughal India.

Through a carefully crafted AR interface, you can walk the marble terraces, step inside the echoing cenotaph chamber, and examine the dome that has captivated visitors for nearly four hundred years. A glowing pink navigation line guides your path, while interactive scan points reveal the stories, craftsmanship, and symbolism behind each feature you encounter.

Who is this guide for?

This guide is written for every user — no prior knowledge of augmented reality or Mughal architecture is required. Each section builds on the last, from your first tap on the home screen to mastering the journal and progress features. Refer back to any section at any time; every feature is explained in full.

2. Getting Started

Creating Your Account

Before you can explore the Taj Mahal, you must register an account with your email address. On first launch the app opens the registration screen: enter your email and a password, confirm your password, and tap Register. A one-time verification code is sent to your email — enter it on the next step to verify your address and sign in. If you already have an account, use the Log in link to sign in with your email and password, or continue with Google. You must be signed in to access the AR experience, save discoveries to your journal, and chat with the AI assistants.

The Home Screen

When you open NESS Wonders you arrive at the home screen, a cinematic introduction framed by a view of the Taj Mahal at dawn. From here four primary actions are available:

- Start Exploring — Launches the full AR experience and places you in front of the mausoleum.
- AR Camera — Opens a dedicated camera view to capture and share AR photos.
- Map — Opens the mausoleum map showing every scannable point across the complex.
- Journal — Opens your personal discovery journal, where every feature you have scanned is saved.
- AI Assistant — Opens a chat with the Taj Historian and AR Navigator assistants.
- Plan Your Visit — Plan a route by duration and interest, or start the guided must-see tour.

Navigation Between Screens

Each screen includes a circular back button in the top-left corner that returns you to the previous step. From the Explore screen you can open the mausoleum map at any time using the map pin button in the top-right corner, and the map lets you jump straight to any point of interest in AR.

3. The Augmented Reality Experience

The heart of NESS Wonders is the Explore screen, an augmented reality view of the Taj Mahal. The background is a live feed from your device's rear camera, so the monument's features are overlaid on the world around you in real time. A 'LIVE AR' badge confirms the camera is active; if your camera is unavailable or permission is denied, the app falls back to a high-quality image of the current view.

Capturing & Sharing Photos

A pink shutter button on the right side of the Explore screen (and a dedicated AR Camera screen from the home page) lets you capture a photo of whatever your camera sees, complete with a NESS Wonders watermark. After capturing, a preview appears with three options: Save to download the photo, Share to open your device's share sheet, and Instagram to send it straight to Instagram (or, where sharing isn't supported, save the photo and open Instagram so you can upload it). If your camera is unavailable or permission is denied, the shutter still captures the displayed scene image so you can save and share your visit.

The Pink Navigation Line

A glowing pink fluorescent line is painted onto the ground in front of you. Rather than a fixed route, the line links the actual scannable points in the current view, guiding you from one feature to the next in order. When you have planned a route or started the must-see tour, the line connects those selected points in sequence; otherwise it threads through every point in the current view. A pulsing marker walks the line to draw your eye onward, and a 'Route active' chip appears whenever a planned route is guiding you.

Switching Between Views

The Taj Mahal is explored across seven distinct views, selectable from the segmented control at the bottom of the screen:

- Exterior view — the grand marble facade, flanking minarets, gateway, and surrounding buildings.
- Interior view — the echoing cenotaph chamber, inlay work, calligraphy, and marble screens.
- Dome view — the great onion dome, its finial, lotus motif, and rooftop kiosks.
- Garden view — the four-quartered Char Bagh garden, waterways, fountains, and riverfront.
- Forecourt view — the outer jilaukhana courtyard, gatehouse, bazaar street, and approach.
- Museum view — the Taj Museum galleries of portraits, manuscripts, coins, and Mughal artifacts.
- Riverfront view — the Yamuna riverfront terrace, ghats, and the monument's riverside reflection.

Tapping a view name instantly transitions the background to that area. All scan points for the selected view appear as pulsing markers, and the navigation line redraws itself for the new space.

4. Scanning Points of Interest

Significant architectural and historical features are marked throughout each view with pulsing pink scan markers. Each marker carries a short label so you know what it represents before you scan it.

How to Scan

- Locate a pulsing pink marker on the screen.
- Tap the marker to scan the feature.
- A panel slides up from the bottom while NESS Wonders analyzes the feature.
- Within a few seconds a richly written explanation appears, covering the feature's significance, history, and lesser-known facts.
- Close the panel with the X button to continue exploring.

What Happens When You Scan

Every scan is powered by an AI guide that writes a fresh, engaging explanation tailored to the specific feature you scanned. The explanation is also saved automatically to your Discovery Journal, so you can return to it later without scanning again.

5. The Mausoleum Map

The mausoleum map offers a bird's-eye schematic of the entire Taj Mahal complex. Every scannable point is plotted on the map and color-coded by the view it belongs to:

- Pink — Exterior points
- Purple — Interior points
- Blue — Dome points
- Green — Garden points
- Amber — Forecourt points
- Red — Museum points
- Cyan — Riverfront points

Tap any point on the map to jump directly to that feature in the AR experience — the correct view loads automatically and the explanation panel opens immediately. The map is the fastest way to revisit a feature or

6. Points of Interest Reference

NESS Wonders contains 165 scannable points of interest across the seven views. The complete reference is listed below, organized by area. Use this section to plan your tour or to look up a feature you have already scanned.

Exterior (17 points)

Main Dome	The iconic white marble onion dome
North-East Minaret	One of four flanking minarets tilted outward
North-West Minaret	The minaret on the north-west corner
South-East Minaret	The south-east minaret facing the river
South-West Minaret	The south-west corner minaret
Great Gate	The main entrance gateway (Darwaza-i-Rauza)
Char Bagh	The four-quartered Mughal garden symbolizing Paradise
Reflecting Pool	The al-Hawd al-Kawthar reflecting pool running through the garden
Mosque	The red sandstone mosque (Masjid) on the western side
Guest House	The Mihman Khana (Jawab) mirroring the mosque on the eastern side
Marble Platform	The raised chabutara on which the mausoleum stands
Pishtaq Arch	The rectangular frame and iwan arch framing the main entrance
Iwan Portal	The grand central arched recess on each face of the mausoleum
Plinth Base	The high stone plinth raising the mausoleum above the river floodplain
Guldasta Turrets	Thin ornamental pinnacles (guldastas) rising along the parapet
Crenellated Parapet	The open marble balustrade crowning the mausoleum walls
Corner Pishtaq	Smaller arched frames on the chamfered corners of the structure

Interior (16 points)

Mumtaz Cenotaph	The elaborately decorated cenotaph of Mumtaz Mahal
Shah Jahan Cenotaph	The larger, simpler cenotaph of Emperor Shah Jahan beside hers
True Tombs	The actual sarcophagi in the lower crypt chamber beneath
Pietra Dura	Semi-precious stone inlay work of floral motifs on marble walls
Thuluth Calligraphy	Quranic verses in Thuluth script by Amanat Khan around the arches
Marble Jali Screen	The octagonal perforated marble screen enclosing the cenotaphs
Acoustic Dome	The echoing chamber creating the famous whispering-gallery effect
Tessellated Floor	The black-and-white chequered marble floor of the cenotaph chamber
Spandrel Inlay	Decorated spandrels bearing floral arabesques in gemstones
Ever-burning Lamp	A lamp motif inlaid above the cenotaph, ever-lit in Mughal tradition
Blind Niches	Recessed alcoves on the walls that create depth and shadow play
Writing Desk	An inlaid marble desk believed used by Shah Jahan in captivity
Marble Doorway	The carved marble jamb framing the entrance to the chamber
Painted Ceiling	The flat painted ceiling between the inner and outer dome shells
Wainscot Panels	Lower marble dados with scrolled floral inlay framing the walls
Hanging Lamp	A replica lamp suspended over the cenotaphs evoking eternal light

Dome (14 points)

Gilded Finial	The gilded bronze finial (kalash) crowned by a crescent atop the dome
Lotus Motif	The inverted lotus design carved at the dome's base
Drum Cylinder	The tall cylindrical drum upon which the onion dome rests
NE Chattri	The smaller domed kiosk on the north-east corner of the roof
NW Chattri	The north-west chattri kiosk mirroring its twin
Necking Band	The decorative band transitioning the dome to its drum
Dome Inlay	Traces of geometric inlay around the dome's equator
Marble Gargoyle	Drainage spouts shaped as lion heads on the drum
Roof Terrace	The marble chabutara platform surrounding the dome base
SE Chattri	The south-east domed kiosk mirroring its twin on the roof
SW Chattri	The south-west chattri kiosk balancing the rooftop symmetry
Crescent Crown	The crescent moon finial pointing heavenward, an Islamic symbol
Dome Ribs	Subtle internal ribs giving the bulbous dome its onion shape
Dome Base Band	The moulded band where the dome curves outward from the drum

Garden (18 points)

Char Bagh Garden	The four-quartered Mughal paradise garden divided by waterways
Cross Waterways	The intersecting marble channels dividing the four garden quarters
Lotus Pond	A central raised lotus-shaped marble tank (al-Hawd al-Kawthar)
Marble Fountain	Ornamental fountains fed by gravity along the central axis
Cypress Trees	Symmetrical rows of cypress (sarv) symbolizing eternity and death
Fruit Orchards	Mango and citrus trees once filling the garden quarters
Yamuna Riverfront	The open riverside terrace facing the Yamuna, framing the reflection
Enclosure Wall	The red sandstone boundary wall enclosing the complex
Entry Dalan	The covered entrance veranda leading into the garden complex
Khas Mahal Terrace	The private marble terrace overlooking the riverfront
Sawan Pavilion	One of two white marble pavilions framing the garden's north end
Bhadoon Pavilion	The twin marble pavilion mirroring Sawan on the garden's south side
Khiyaban Walkway	The raised stone paths (khiyabans) between the garden quarters
Flower Beds	Geometric flower beds replanted in the Mughal tradition
Water Cistern	A stone cistern feeding the fountains by gravity from the river
Diana Bench	The famed marble bench facing the reflecting pool view
Side Gate	A lesser sandstone gate giving access to the riverside terrace
Sunken Parterre	A lower parterre section once planted with fragrant herbs

Forecourt (17 points)

Main Western Gate	The grand sandstone entrance to the outer forecourt
Jilaukhana Courtyard	The vast outer courtyard where visitors once gathered
Caravanserai Quarters	Lodgings that housed travelers and merchants
Bazaar Street	A lined market street leading toward the inner gate
Forecourt Fountain	A central fountain cooling the courtyard air
Service Gate	A side gate for staff and deliveries

Enclosure Wall	The high red sandstone wall ringing the forecourt
Ticket Pavilion	The modern entry kiosk for visitors
Forecourt Walkway	The stone path leading inward to the great gate
Inner Gatehouse	The threshold between forecourt and the garden complex
Forecourt Garden	Small ornamental beds lining the approach
Naqqar Khana	The drum house announcing royal arrivals
Watchtower	A corner tower overlooking the approach
Step Well (Baoli)	An ancient stepped well drawing groundwater
Shade Pavilion	A resting pavilion offering respite from the sun
Lamp Post	Cast-iron lamps lighting the forecourt at dusk
Forecourt Seating	Stone benches lining the shaded edges

Museum (66 points)

Museum Entrance	The doorway into the Taj Museum galleries
Main Gallery	The central hall displaying the core collection
Portrait of Mumtaz Mahal	A painted likeness of the empress who inspired the Taj
Portrait of Shah Jahan	A portrait of the emperor who built the mausoleum
Architectural Models	Scale models showing the construction of the complex
Original Drawings	Surviving design drawings of the mausoleum
Pietra Dura Samples	Specimens of the gemstone inlay technique
Calligraphy Samples	Examples of Amanat Khan's thuluth script
Mughal Coins	Gold and silver coins of the Mughal era
Illuminated Manuscripts	Quranic and court manuscripts with gilded pages
Royal Jewels	Jeweled ornaments of the imperial court
Mughal Textiles	Brocades and embroidered fabrics of the period
Ceremonial Weapons	Daggers and swords of Mughal craftsmanship
Mughal Ceramics	Glazed pottery and tiles from the workshops
Historical Maps	Old maps charting the Agra complex over centuries
Museum Timeline	A chronological timeline of the Taj's history
Aurangzeb Edict	A royal decree from the later Mughal period
Imperial Farmans	Official orders bearing the emperor's seal
Royal Seals	Wax and metal seals of the imperial chancery
Mughal Miniatures	Delicate miniature paintings of court life
Akbarnama Pages	Illustrated folios from the chronicle of Akbar
Padshahnama	Paintings from the chronicle of Shah Jahan's reign
Garden Paintings	Depictions of Mughal pleasure gardens
Hunting Scenes	Paintings of royal hunts and expeditions
Darbar Paintings	Court audience scenes in tempera
Music Manuscripts	Notations of Mughal court music
Astrolabes	Brass astrolabes used for astronomy and prayer times
Scientific Instruments	Quadrants and celestial globes of the era
Medical Treatises	Unani medical texts with anatomical illustrations
Herbal Pharmacopeia	Illustrated books of medicinal plants
Mughal Carpets	Woven carpets with floral and geometric patterns

Prayer Rugs	Knotted rugs used for daily prayer
Royal Tents	Reproductions of the imperial camping pavilions
Miniature Thrones	Scale models of Mughal seating thrones
Elephant Howdah	A carved wooden howdah for royal processions
Chainmail Armor	A suit of Mughal chainmail and plate
Mughal Helmet	A domed steel helmet with nasal guard
Ceremonial Shield	A painted buckler of buffalo hide and steel
Composite Bow	A horn-and-sinew bow of the imperial guard
Quiver of Arrows	A leather quiver with ceremonial arrows
Jeweled Dagger	A jade-hilted dagger set with rubies
Shamshir	A curved Persian-style cavalry sword
Matchlock Gun	An early Mughal firearm with match mechanism
Cannon Model	A scale model of a bronze siege cannon
Gold Mohur	A high-value gold coin of the realm
Silver Rupee	The standard silver currency of the empire
Copper Dam	The everyday copper coin of the bazaar
Trade Weights	Brass weights used in the imperial markets
Royal Jewelry	Necklaces and earrings of gold and gemstones
Imperial Crown	A replica of the emperor's jeweled aigrette
Signet Rings	Rings bearing the imperial cypher
Turban Ornament	A jeweled sarpech for the royal turban
Silk Brocade	Gold-woven silk from imperial looms
Fine Muslin	Legendary see-through muslin of Bengal
Zardozi Embroidery	Gold-thread embroidery on velvet
Blue Pottery	Glazed blue-white ceramics of Persian influence
Matte Ware	Unglazed terracotta storage vessels
Glazed Tiles	Mosaic tiles from the mausoleum walls
Glassware	Enamelled glass vessels of the court
Carved Woodwork	Sandalwood panels with floral relief
Ivory Inlay	Ivory inlay on a writing cabinet
Bidri Ware	Inlaid zinc alloy vessels from Bidar
Museum Lamps	Antique oil lamps lighting the galleries
Mughal Furniture	A low marble-inlaid writing table
Rare Books	Early printed accounts of the Taj Mahal
Historic Photographs	19th-century photographs of the monument

Riverfront (17 points)

Yamuna River View	The sweeping view of the Yamuna from the terrace
Riverfront Terrace	The marble terrace running along the riverbank
Riverside Retaining Wall	The fortified wall holding the river at bay
River Steps (Ghats)	Stone steps descending to the water's edge
Mehtab Bagh	The moonlight garden visible across the river
River Reflection	The monument mirrored in the still Yamuna waters
Traditional Boats	Wooden boats once plying the river trade

Riverside Platform	A raised platform for viewing the river
Marble Balcony	A projecting balcony overlooking the water
Riverside Jali Screen	Carved marble lattice facing the river
Riverside Spouts	Marble drainage spouts along the terrace edge
Riverside Garden	Plantings softening the riverbank edge
Sunset Point	The famed vantage for the Taj at dusk
Dawn Viewpoint	Where the marble glows pink at sunrise
Morning Mist	The river fog wrapping the monument at dawn
River Birds	Heron and kites that frequent the Yamuna banks
Agra Skyline	The distant city silhouette beyond the river

7. The Discovery Journal

Your Discovery Journal is a personal record of every feature you have scanned during your tour. It persists across sessions, so you can close the app and return later to revisit everything you learned.

What is Saved

- The name and short description of each scanned feature.
- The full AI-generated explanation shown at scan time.
- The view in which the feature was discovered.
- The date and time of the scan.

Using the Journal

Open the journal from the home screen. Each discovery appears as a card; tap a card to open the full explanation in a slide-up panel. To remove an entry, tap the trash icon on its card. The journal counts your discoveries at the top of the screen so you always know how much of the Taj Mahal you have uncovered.

8. Tour Progress Tracking

A progress bar at the top of the Explore screen shows how many of the 165 points of interest you have successfully scanned. The bar fills with a glowing pink gradient as you discover new features, and displays both the count (for example, 12 / 165) and the percentage. When you have scanned every point, the bar celebrates your completion of the tour. The progress is based on your saved journal entries, so it reflects your true discoveries even across multiple sessions.

9. Tour Planning & the Must-See Tour

The Plan Your Visit screen, reached from the Plan Your Visit button on the Home page, helps you shape your visit around your available time and your interests.

Planning a Route

- Choose a duration — 30 minutes, 1 hour, 2 hours, or half a day.
- Select one or more interests: Architecture, History, Gardens, Photography, or Spiritual.
- Tap Create My Route to build a personalized, ordered list of stops that fits your time.
- Review the route summary, then tap Start Tour to begin a narrated walkthrough of every stop.

The Guided Must-See Tour

For a curated experience, tap the Guided Must-See Tour card. It assembles the essential highlights of the Taj Mahal in a single ordered tour — the great gate, the reflecting pool, the dome, a minaret, the iwan, the cenotaph, the marble screen, the calligraphy, the garden, and the riverfront — and narrates each in turn.

How Routes Affect the AR View

When a route or the must-see tour is active, the pink navigation line on the Explore screen connects those selected points in order, guiding you from one to the next. A 'Route active' chip appears near the top of the screen; tap its X to clear the route and return to the default line through all points in the current view.

10. Audio Guide

Every scan panel and every tour stop includes an audio guide button marked with a speaker icon. Tap it to generate a spoken narration of the explanation in your selected language.

- The first tap generates the audio on demand, then plays it automatically.
- Tap again to pause or resume playback.
- The narration is always in your selected language, matching the written explanation.

Audio is generated on demand to conserve resources, so the first tap takes a moment to prepare before playback begins.

11. Proximity Alerts & Vibration

As you move along the navigation line during a planned route or the must-see tour, NESS Wonders watches your position relative to each scannable point. When you approach a point, the app does two things:

- Shows a message naming the nearby feature and inviting you to scan it.
- Issues a gentle vibration on supported devices, so you notice even without watching the screen.

Proximity alerts fire once per point per pass. Vibration requires a device that supports the Vibration API (most mobile phones); on unsupported devices you will still see the on-screen message. To stop the alerts, clear the active route with the X on the 'Route active' chip.

12. Tips for the Best Experience

- Follow the pink navigation line in order for the most coherent tour narrative.
- Scan every marker you pass — each feature holds a unique story you won't want to miss.
- Use the mausoleum map to spot points you may have overlooked in a view.
- Open the journal periodically to review what you've learned; repetition deepens memory.
- Switch between views to compare the exterior grandeur with the intimate interior details.
- Read each explanation fully — the AI guide includes facts most visitors never learn.
- If a scan explanation doesn't appear, close the panel and tap the marker again.
- Plan a route before you start to make the most of limited time, or take the must-see tour.
- Use the audio guide to keep your eyes on the monument while you listen to each feature's story.

13. About the Taj Mahal

The Taj Mahal was commissioned in 1632 by the Mughal emperor Shah Jahan in memory of his beloved wife Mumtaz Mahal, who died in childbirth. Construction took approximately twenty-two years and employed more than twenty thousand artisans, craftsmen, and laborers from across the Islamic world and beyond.

The complex is widely considered the finest example of Mughal architecture — a synthesis of Persian, Islamic, and Indian traditions. Its gleaming white marble exterior shifts in color with the light of the day, appearing soft pink at dawn, brilliant white at noon, and golden under moonlight. The site was designated a UNESCO World Heritage Site in 1983 and is one of the New Seven Wonders of the World.

More than a building, the Taj Mahal is a monument to love, loss, and the pursuit of paradise on earth. NESS Wonders invites you to discover that story, one feature at a time.

14. AI Assistants

NESS Wonders includes two AI assistants you can chat with from the AI Assistant screen (the sparkle button on the Home page and in the AR view).

Taj Historian

A scholarly guide that provides deep historical insights and architectural details. Ask it about any feature you scanned, the people behind the monument, Mughal craftsmanship, symbolism, or lesser-known stories. It replies in your selected language.

AR Navigator

A practical guide that helps you find your way around the complex. It suggests efficient routes, locates points of interest, and helps you decide what to scan next based on your progress.

Choose an assistant from the two cards, then type your question. The assistant thinks for a moment and replies in a chat thread. Use the back arrow to switch between assistants.

15. Languages

NESS Wonders is available in ten of the world's most widely spoken languages: English, Spanish, Chinese, Hindi, Arabic, French, Portuguese, Russian, German, and Japanese.

Switch language anytime using the globe button in the top-right corner of the Home, Explore, Journal, and Assistant screens. Your choice is remembered across sessions. The entire interface — and every AI-generated scan explanation and assistant reply — adapts to your selected language. Arabic uses a right-to-left layout automatically.

16. Troubleshooting & FAQ

A scan explanation doesn't appear.

The AI guide needs a moment to write each explanation. If the loading spinner persists, close the panel and tap the marker again. Your connection must be active for explanations to generate.

My journal seems empty but I've scanned features.

The journal saves an entry the moment an explanation finishes loading. If you closed the panel during loading, the entry may not have saved. Re-scan the feature to save it.

The progress bar hasn't updated.

The bar refreshes after each scan completes and saves. If it appears stale, open and return to the Explore screen to trigger a fresh count from your journal.

I want to remove a journal entry.

Open the journal and tap the trash icon on the card you wish to delete. The entry is removed permanently and no longer counts toward your progress.

Do I need an account to use NESS Wonders?

Yes. Registration with an email address is required so that your journal, progress, and assistant conversations are saved to your account. After registering, verify your email with the one-time code we send you, then sign in. You can sign out at any time and sign back in with the same email.

17. Quick Reference Card

Home screen	Starts the app; access Explore, Map, and Journal.
Explore screen	The AR experience with navigation line and scan markers.
Scan marker	Pulsing pink dot; tap to reveal a feature's story.
View switcher	Bottom control to move between Exterior, Interior, Dome, Garden, Forecourt, Museum, Riverfront.
Map button	Top-right pin; opens the full mausoleum map.
Journal	Saves every scanned feature for later review.
Progress bar	Top of Explore; shows scanned / total points.
AR Camera	Dedicated camera screen from Home; capture, save, and share AR photos.
Capture button	Pink shutter on Explore; takes a shareable AR photo.
Instagram share	Sends a captured AR photo to Instagram, or saves it and opens Instagram.
Assistant button	Sparkle icon; opens the AI historian & navigator chat.
Language button	Globe icon; switches the app between 10 languages.
Plan Your Visit	Plan a route by time & interest, or take the must-see tour.
Audio guide	Speaker button on scan/tour; narrates the feature in your language.
Proximity alert	On-screen message + gentle vibration when you near a scan point.
Route active chip	Shows when a planned route guides the pink line; tap X to clear.
Register / Log in	Email registration is required; verify with the one-time code sent to your email.
Back button	Top-left circle on every screen.
