1. Welcome to NESS Wonders

Welcome to NESS Wonders, your augmented reality companion for exploring Angkor Wat, the largest religious monument in the world. This app transforms your visit into an immersive journey through centuries of Khmer history, architecture, and mythology.

Whether you are standing among the ancient galleries or planning your trip from home, NESS Wonders brings the temple to life through AR scanning, AI-powered storytelling, and offline audio narration that works even without an internet connection.

Key Features at a Glance

- 162 scannable points across 6 temple zones, each with rich historical descriptions
- Live AR camera view with interactive scan markers and navigation waypoints
- 3 AI companions: Historical Narrator, Route Planner, and Wayfinding Guide
- Multi-language support with 10 languages: English, Khmer, Chinese, Japanese, Korean, French, Spanish, German, Portuguese, and Hindi
- On-device text-to-speech audio narration in your selected language that works fully offline
- Interactive temple map showing all scan points and your discovery progress
- Audio guide library with zone-based filtering for quick information lookup
- Offline downloads for temple maps and audio guides
- Photo capture at scan points with a gallery organized by temple zone and social sharing
- Route planner that creates personalized itineraries based on duration and interests
- Memories gallery tracking every point you have discovered

2. Getting Started

When you launch NESS Wonders, you will see the Welcome screen featuring a panoramic view of Angkor Wat. From here, you can access every feature of the app.

Home Screen Navigation

- Start Exploring - Launches the AR exploration view with live camera
- Plan your route - Create a personalized itinerary by duration and interests
- Temple map - Opens the interactive map of all scan points
- Meet your AR guides - Browse and chat with AI companions
- Offline downloads - Download maps and audio for offline use
- My memories - View your collection of discovered points
- Photo gallery - View all captured photos organized by temple zone
- User guide - Download this comprehensive PDF guide

Quick Start

For first-time users, we recommend: (1) Tap 'Start Exploring' to enter the AR view. (2) Follow the navigation path through the 6 zones. (3) Tap any diamond-shaped scan point marker to learn about that feature. (4) Use the Quick Scan button to automatically scan the nearest undiscovered point. (5) Visit the Downloads page before your trip to cache everything for offline use.

3. AR Exploration

The AR Exploration view is the heart of NESS Wonders. It provides an immersive, augmented reality interface for discovering the temple's features as you walk through the grounds.

The AR Camera View

When you enter exploration mode, the app uses your device's live camera feed as the AR background. The view includes scanlines, grid overlays, and a vignette effect to create an immersive AR feel. Floating scan point markers appear overlaid on the scene at their physical locations within the temple. Point your camera at temple features to see the scan markers in context.

Scan Points

Scan points are represented by diamond-shaped markers on the AR view. Unscanned points appear in pink with a pulsing animation, while already-discovered points turn green. To learn about a feature, simply tap its marker.

- Pink diamond (pulsing) - Not yet scanned, tap to discover
- Green diamond - Already discovered, tap to review

When you tap a scan point, the app loads historical information about that feature. If you have downloaded the offline guide, the information appears instantly from your device's storage. Otherwise, an AI generates a rich description on the fly.

Quick Scan

The large button at the bottom center of the AR view is the Quick Scan button. Tapping it automatically scans the nearest undiscovered point in your current zone, saving you from hunting for the exact marker. This is perfect for fast-paced exploration.

Navigation Waypoints

The temple is divided into 6 sequential zones, connected by a navigation path shown in the AR view. Use the left and right arrow buttons to move between zones. Each zone has its own set of scan points. The current zone name is displayed in the top bar.

Audio Narration

After scanning a point, an audio narration bar appears at the top of the screen. The app uses your device's built-in text-to-speech engine to read the description aloud, so it works completely offline without using any data. Use the play/pause button to control playback, and the X button to dismiss the narration bar.

Info Panels

When you scan a point, an info panel slides up from the bottom showing the feature's title, historical era, location within the temple, a reference image, and the full description. Swipe or tap to dismiss the panel and continue exploring.

Photo Capture

After scanning a point, a camera button appears on the right side of the screen. Tap it to capture a photo of what you see through the AR camera. Each photo is automatically watermarked with the scan point name and saved to your memories. You can capture multiple photos at each point.

4. Temple Zones

Angkor Wat is explored through 6 sequential zones, each representing a different area of the temple complex. Each zone contains multiple scan points with unique historical content.

Zone 1: Main Entrance

Your journey begins at the western entrance, where you cross the sacred moat via the stone causeway. This zone features the Western Gopura, Naga Balustrade, Sacred Moat, Stone Causeway, Guardian Lions, Eastern Approach, Reflection Pool, and Pilgrim Terrace. Learn about the temple's orientation, the symbolic moat, and the grand processional entry.

Zone 2: Western Gallery

The gallery corridors house some of Angkor Wat's most famous bas-reliefs. Discover the Battle of Kurukshetra, Apsara Dancers, Gallery Pillars, Churning of the Ocean, Heaven and Hell, Ancient Inscriptions, Ramayana Relief, and Gallery Windows. These carvings tell stories from Hindu epics and Khmer history.

Zone 3: Bas-Relief Corridor

This zone features the Central Prasat, Lotus Carvings, Sacred Stairway, Devata Goddesses, Victory Pavilion, Linga Shrine, Corridor Arches, and Garuda Guardian. Explore the intricate carvings and architectural details that make Angkor Wat a masterpiece of Khmer art.

Zone 4: Central Courtyard

The inner courtyard contains the Holy Libraries, Dvarapala Guardians, Inner Courtyard, Ceremonial Pool, Royal Walkway, and Suryavarman's Court. This area was the heart of temple activity, where rituals were performed and the king held court.

Zone 5: Upper Terrace

As you ascend to the upper levels, discover the Royal Terrace, Standing Buddha, Tiered Terrace, Terrace Gargoyles, Buddha's Footprint, and Celestial Carvings. These features reflect the temple's later Buddhist period and astronomical significance.

Zone 6: Central Tower

The summit of Angkor Wat features the Central Sanctuary, Vishnu Idol, Lotus Crown, Sanctuary Doors, Offering Altar, and Corbelled Ceiling. This is the spiritual center of the temple, where the primary deity once resided and where pilgrims still leave offerings today.

5. Interactive Temple Map

The Temple Map page provides a bird's-eye view of all 162 scan points across the 6 zones, helping you see what is nearby and plan your route.

Accessing the Map

Tap 'Temple map' on the home screen to open the interactive map. The map shows a stylized layout of the temple grounds with the moat, gallery enclosures, and central towers.

Understanding the Layout

The map displays all scan points as diamond markers positioned within the temple layout. The navigation path connecting the 6 zones is shown as a dashed gradient line. Zone labels mark each area, and the path shows the recommended exploration route from the Main Entrance to the Central Tower.

Progress Tracking

A progress bar at the top shows how many of the 162 points you have discovered. Discovered points appear in green, while undiscovered points are pink. Below the map, a zone-by-zone list shows your progress in each area.

Finding Nearby Points

Tap any marker on the map to see a detail sheet with the point's name, zone, and discovery status. The 'Explore This Area' button takes you to the AR exploration view. Use the zone list at the bottom to jump to a specific zone's exploration.

6. AI Guides

NESS Wonders includes 3 AI-powered companions that you can chat with for personalized guidance. Access them from the 'Meet your AR guides' link on the home screen.

Historical Narrator

An expert storyteller who brings Angkor Wat to life through vivid narratives about the Khmer Empire, ancient architecture, and centuries of history. Ask about specific features, the kings who built the temple, or the mythology behind the carvings.

- Example: 'Tell me about the central tower'
- Example: 'Who built Angkor Wat and why?'
- Example: 'What do the bas-reliefs depict?'

Route Planner

Recommends personalized exploration routes based on your available time, interests, and mobility. Whether you have one hour or a full day, the Route Planner creates an itinerary that covers the highlights.

- Example: 'I have 1 hour, what should I see?'
- Example: 'Plan a route for photography lovers'
- Example: 'I'm visiting with kids'

Wayfinding Guide

Helps you navigate through Angkor Wat with clear, landmark-based directions. If you are lost or looking for a specific feature, the Wayfinding Guide will point you in the right direction.

- Example: 'How do I get to the central tower?'
- Example: 'Where are the Apsara carvings?'
- Example: 'I'm near the entrance, where to next?'

How to Chat

Tap any guide card to open a conversation. Type your question and the AI will respond with detailed, context-aware answers. You can use the suggested starter prompts or ask your own questions. Conversations are saved for future reference.

7. Audio Guides by Zone

The Guides page includes a zone-based audio guide library, allowing you to quickly find information about specific temple areas. This is especially useful for planning your visit or looking up details about a feature you have already seen.

Using the Zone Filter

Scroll horizontally through the zone filter tabs at the top of the audio guides section. Each tab shows the zone name and the number of guides available in that zone. Tap a zone to filter the list, or select 'All Zones' to see everything.

- All Zones - Shows all 162 audio guides
- Zone 1 through Zone 6 - Shows only guides for the selected zone

Exploring Guide Cards

Each audio guide card shows the feature's title, historical era, and location. Tap a card to expand it and read the full description, which includes historical context, architectural details, and interesting facts. Each card also has an 'Explore this area' link that takes you to the AR exploration view.

On-Device Narration

When you scan a point in the AR view, the description is read aloud using your device's built-in text-to-speech engine. This works completely offline, making it perfect for use at the temple where internet connectivity may be limited. No audio files need to be downloaded - the narration is generated on your device.

8. Offline Downloads

The Downloads page lets you cache temple maps and audio guide content for offline use. This is essential for visiting Angkor Wat, where internet connectivity can be unreliable.

Temple Maps

Download up to 10 temple map images, including panoramic views, gallery interiors, central tower views, and bas-relief details. These are cached on your device and can be viewed without an internet connection.

Audio Guides

All 42 audio guide descriptions are available for offline use. Since the app uses on-device text-to-speech, you do not need to download audio files. The guide descriptions are stored locally and the narration is generated on your device.

Download Options

- Download All - Cache all maps and guides at once (recommended before your trip)
- Individual Download - Tap the download button on any individual item
- Clear All - Remove all cached content to free up storage space

A progress bar at the top shows your overall download status. The page also displays how many items are cached and how much storage is being used.

9. Memories

The Memories page is your personal collection of discovered scan points. Every time you scan a point in the AR view, it is saved to your memories with its title, description, era, location, and a reference image.

Viewing Your Collection

Access your memories from the 'My memories' link on the home screen. The page shows a grid of all your discoveries, with a counter at the top showing how many of the 162 points you have found.

Memory Details

Tap any memory card to see the full details, including the historical description, era, and location. This is a great way to review what you learned after your visit, or to revisit a favorite feature.

Building Your Collection

To add more memories, explore the AR view and scan new points. Your progress is saved automatically on your device, so you can continue building your collection across multiple visits. Check the Temple Map to see which points you have not yet discovered.

10. Photo Capture & Gallery

Capture photos at any scan point during your AR exploration and view them all in one place, organized by temple zone.

Capturing Photos

When you scan a point in the AR view, a camera button appears on the right side of the screen. Tap it to capture a photo using your device's live camera feed. The photo is automatically watermarked with the scan point name and the NESS Wonders branding, then saved to your memories. You can take multiple photos at each scan point.

The Photo Gallery

The Photo Gallery page displays all your captured photos in one place, organized by temple zone. Access it from the 'Photo gallery' link on the home screen or the icon in the Memories page header. Each zone section shows the number of photos, and each photo is labeled with its scan point name.

Sharing on Social Media

Tap any photo in the gallery to open it in a full-screen lightbox. From there, tap the 'Share Photo' button to share the photo on social media. The app uses your device's native sharing feature, which supports Instagram, Facebook, WhatsApp, and other platforms. If native sharing is not available, the photo will be downloaded to your device instead.

Photos in Memories

Captured photos are also visible in the Memories page. Tap any memory card to see its details, and your captured photos appear in a 'Your Photos' section with a horizontal scroll. A badge on each memory card shows how many photos you have captured at that point.

11. Route Planner

The Route Planner creates a personalized visit itinerary based on your available time and interests, so you can make the most of your visit to Angkor Wat.

Planning Your Visit

Access the Route Planner from the 'Plan your route' link on the home screen. Select your available duration (30 minutes, 1 hour, 2 hours, half day, or full day) and choose your interests (History, Architecture, Photography, Religion, Nature, or Family-friendly). You can select multiple interests.

Generating Your Route

Tap 'Generate Route' and the AI will create a personalized itinerary. The route includes a summary, a list of recommended stops with the zone, specific scan point, why it matches your interests, and the estimated time to spend at each stop. Tap 'Start Exploring' to begin your customized journey.

Combining with the AI Route Planner Agent

For more conversational route planning, you can also chat with the Route Planner AI companion from the Guides page. The dedicated Route Planner page provides a structured form-based approach, while the AI companion lets you ask follow-up questions and refine your itinerary in real time.

12. Multi-Language Support

NESS Wonders supports 10 languages so you can explore Angkor Wat in your preferred language. The language selector is available on the home screen.

Available Languages

- English
- Khmer (Cambodian)
- Chinese (Simplified)
- Japanese
- Korean
- French
- Spanish

What Gets Translated

When you select a language, the app interface text updates immediately. More importantly, when you scan a point, the AI generates the historical explanation in your selected language, and the audio narration uses a matching voice to read it aloud. This means every scan point's description and audio guide is available in all 10 languages.

Changing Languages

Tap the language selector in the top-right corner of the home screen to open the language menu. Select your preferred language and the app will update instantly. Your language choice is saved on your device for future visits.

13. Tips & Best Practices

Best Time to Visit

Arrive before sunrise (around 5:00 AM) to experience the iconic Angkor Wat sunrise and beat the crowds. The eastern side of the temple is beautifully lit in the morning, while the western galleries are best in the afternoon. Sunset (around 5:30 PM) offers stunning golden light on the towers.

Photography Tips

- Use the Reflection Pool near the western entrance for the classic mirror-image shot at dawn
- The Gallery Windows create beautiful light-and-shadow patterns in the late afternoon
- The Eastern Approach is quieter and offers unique angles away from the crowds
- Bring a wide-angle lens for the tight spaces in the galleries and corridors

Offline Preparation

Before your trip, visit the Downloads page and tap 'Download All' to cache all temple maps and audio guides. This ensures everything works without internet at the ruins. Do this over Wi-Fi to avoid data charges.

Battery Saving

- Lower your screen brightness while exploring
- Close other apps running in the background
- Use Quick Scan instead of manually hunting for markers to spend less time with the screen on
- Bring a portable power bank - AR features use more battery than typical apps

Audio Experience

Bring headphones or earbuds for the best audio narration experience. The on-device text-to-speech works offline, so you can listen to descriptions at every scan point without using data. Adjust your device volume before entering the temple.

14. Troubleshooting

App Won't Load

Ensure you have a stable internet connection for the initial launch. Once you have downloaded offline content, most features work without internet. If the app is stuck on a loading screen, try closing and reopening it, or check for updates.

Scanning Doesn't Work

If tapping a scan point marker does not respond, try the Quick Scan button at the bottom of the screen. If the issue persists, check that you are in the correct zone for that point using the Temple Map. Some points may be in zones you have not yet navigated to.

Audio Not Playing

The audio narration uses your device's built-in text-to-speech engine. If audio is not playing: (1) Check that your device is not on silent mode. (2) Increase the media volume (not just ringer volume). (3) Ensure text-to-speech is enabled in your device settings. (4) Try closing and reopening the app.

Offline Content Missing

If offline content is not available, visit the Downloads page and re-download. If downloads fail, check your internet connection and try again. You can also try clearing all cached content and re-downloading fresh copies.

Can't Find a Scan Point

Use the Temple Map to see the exact location of all 162 scan points. The map shows which zone each point is in. Navigate to that zone in the AR view using the left/right arrows, then look for the diamond marker. Remember that some points may be in zones you have not yet reached in your exploration path.

Need More Help

If you encounter issues not covered here, try chatting with the Wayfinding Guide AI companion for navigation help, or the Historical Narrator for content questions. For technical issues, try restarting the app or re-downloading offline content.
